

HOW TELEMEDICINE FROM TEXAS ONCOLOGY DELIVERS HIGHLY SPECIALIZED CANCER TREATMENT TO YOU

At Texas Oncology, we use a robust **telemedicine** solution to extend the reach of our experienced network of physicians and the services we provide to help patients like you, regardless of where you live. Telemedicine delivers convenient access to vital services you need, including certain specialized care that may not be physically available at your local Texas Oncology site.

Telemedicine won't eliminate the need for you to travel for aspects of treatment and some in-person doctor visits. But you will be able to engage in consultations and follow-up care remotely using our telemedicine tool, which blends videoconferencing, voice and image-sharing capabilities.

Consultations for the following specialties and services are available via telemedicine from Texas Oncology:

- Advance Care Planning
- Blood and Marrow Transplant
- CAR-T Therapy
- Colon and Rectal Surgery Consultation
- Texas Center for Proton Therapy
- Texas Oncology—Austin Brain Tumor Center
- Texas Oncology—Medical City
Dallas Pediatric Hematology-Oncology
- Texas Urology Specialists

How Texas Oncology's Telemedicine Tool Works

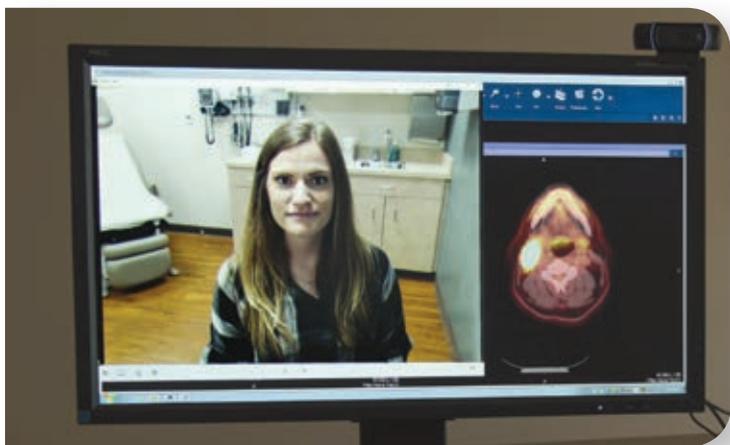

We use **VSee**, a secure video conferencing tool that lets you communicate from your local Texas Oncology site to other Texas Oncology providers located elsewhere in the state.

Your telemedicine consultation will be handled in much the same way as an in-person appointment. You will be escorted to an exam room where a Texas Oncology staff member will connect the teleconferencing technology for you and guide you each step of the way during the telemedicine consultation.

You will be able to see and speak directly with the physician. The medical team also can share files, documents and images on the screen with you.

Texas Oncology will collect payments or co-pays and process your services with your insurance company as usual.

Please inquire with a Texas Oncology staff member at your local practice location if you have questions or would like more detail on telemedicine services from Texas Oncology.
